BRONZE

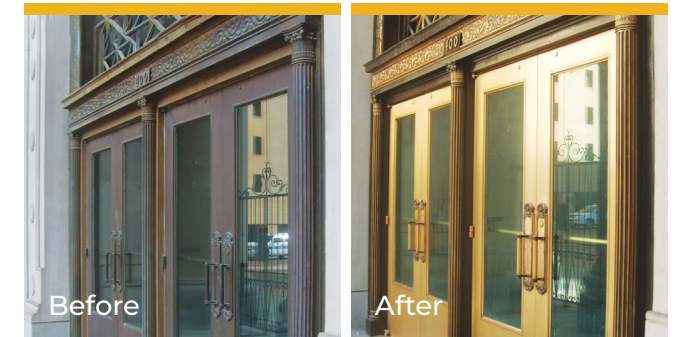

Whether you are looking to shape an environment or just add an accent, bronze finishes provide a warmth that is unmatched by any other metal. Since these finishes are susceptible to oxidation from the elements, Mid America Specialty Services protects the metal by applying clear finishes available in the sheen of your choice. For statuary or historical bronze, the clear finish may be substituted with a waxed finish.

Have a custom bronze finish in mind that you didn't see here? Contact us and we will do our best to duplicate it. Pictures are representative samples. Actual results may vary. A mock-up is suggested for most applications.

STAINLESS STEEL

Stainless steel is a contemporary choice for modern facilities. While it is widely considered a low maintenance alternative, the reality is it requires cleaning and protection to stay beautiful. Mid America Specialty Services can either provide a custom touch to this metal or protect your standard stainless finish with our cleaning or clear finishing processes. Though custom finishes on stainless are not best suited for large panels, their use on accents, trim and design walls can add uniqueness and sophistication.

STEEL

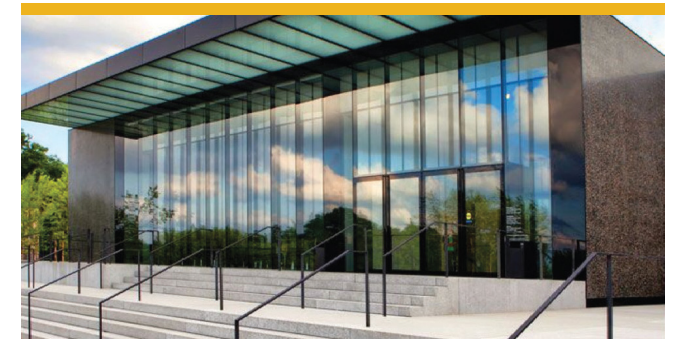

Steel can provide a low material cost with a high aesthetic impact. It can be finished to be bold and powerful or soft and cool. Unless a rusty patina is desired, Mid America Specialty Services protects the metal from oxidation by applying clear finishes available in the sheen of your choice. For heavy wear areas the clear finish may be substituted with a waxed finish.

ALUMINUM

Aluminum is a lightweight and versatile material. You will often see aluminum used for window frames, building entrances and facade paneling in a variety of anodized and painted finishes. We can help clean and restore the original finish or change the look of your aluminum altogether with many paint options.

METAL CONVERSION SYSTEM

Replacing the metal during a renovation can be a strain on the budget or may be impractical without causing further demolition. Mid America Specialty Services can change the look of many of your building finishes on-site with no interruption to your business. Our Metal Conversion System has saved many customers over \$100,000 on their renovation.

FACADE RESTORATION

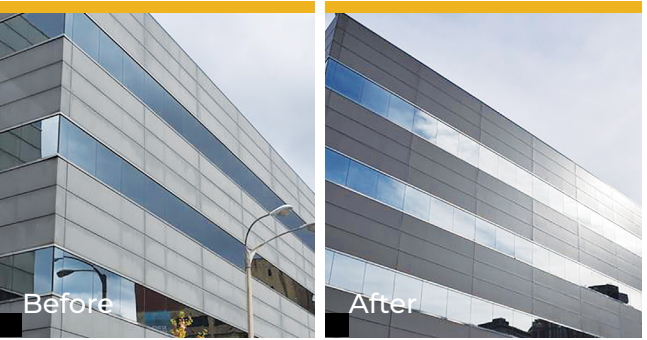

Over time the sun and the elements can fade and deteriorate window frames, facade panels, curtain wall structures and other exterior surfaces. We can clean and apply specialized high performance coatings to help restore the original color and luster to these damaged surfaces. If the original finish is too damaged to restore or you want to change the look of your exterior surfaces, many color options are also available in a variety of durable finishes.
